

In a few months my elder son will be graduating from 9th grade and entering 10th grade. He is a voracious reader. He has read 100's of fiction books. I am amazed by his ability to focus intensely, and complete a fiction book in one day. I read a lot of nonfiction books. My son never read a non-fiction book.

I never force him to read one. How does it matter if he reads fiction or nonfiction. I am happy to see him read. What is more important is that he's developing the habit of lifelong reading. Also reading fiction books helps him to develop visualization skills. For the first time my son asked me the list of non-fiction books he should read.

When the student is ready, the teacher will appear. I promised him to put together a list of books, videos, and materials that he should spend time reading. The list covers several themes including learning, psychology, neuroplasticity, numeracy, statistics and probability, thinking, multidisciplinary, biography, and life.

Charlie Munger once told that, *The best thing a human being can do is to help another human being know more*. I am sharing this list so that any 9th grader and above can get the keys to open the gates of lifelong learning.
